The Problem

Kitsune Assistant

Context

Solution

Benefits

The Problem – Kitsune Assistant

What is Kitsune?

A web platform that works as Underwriter Workbench to manage all the lifecycle of a **policy**, the **payments**, **endorsements** and its **claims**

What is Kitsune Assistant?

AI-powered chatbot for instant and reliable insurance data retrieval.

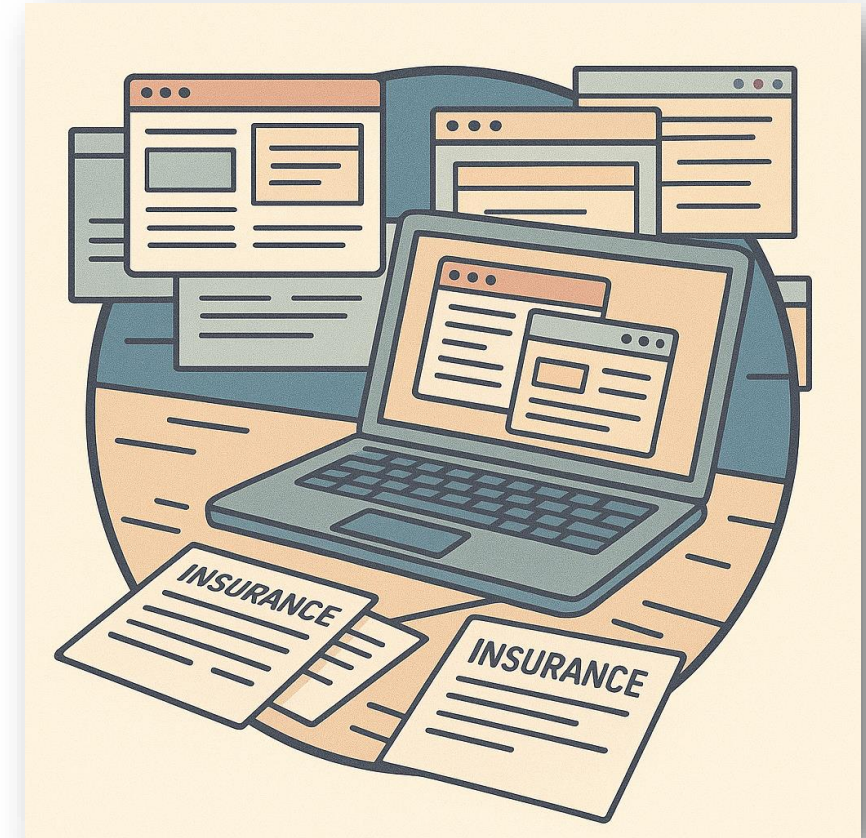

The Problem – Context I

Insurance workflows are data-heavy

- Policies, claims, endorsements across multiple systems.
- Agents need fast, precise answers.

What professionals experience daily

- Fatigue from repetitive lookups.
- Risk of misinterpretation.
- Less time to focus on customers.

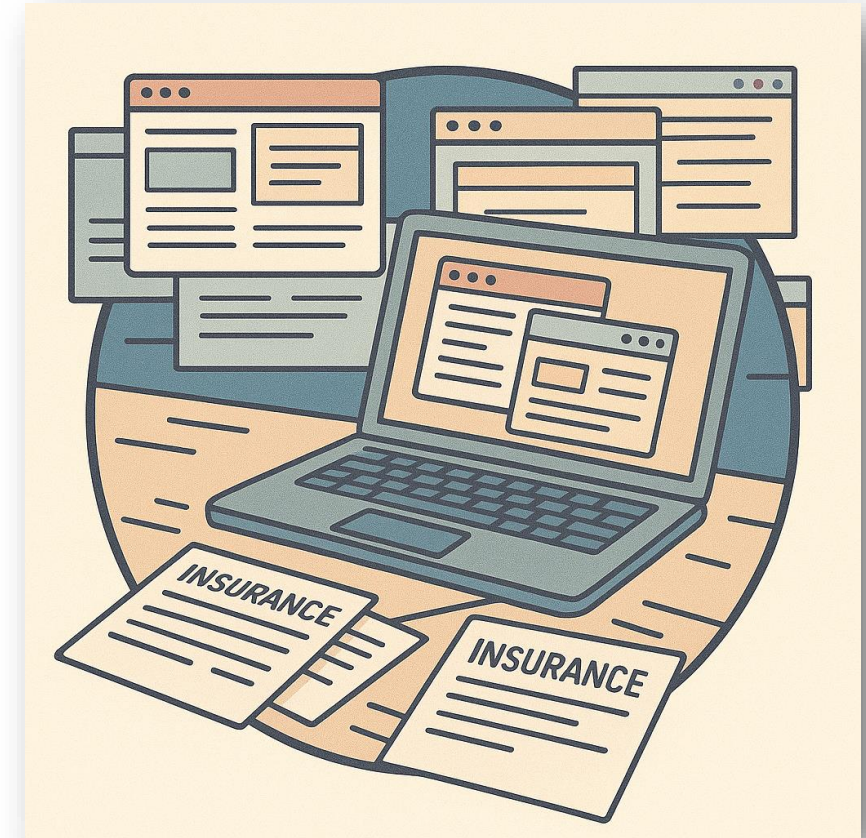

The Problem – Context II

Manual searches are slow & frustrating

- Too many screens to navigate.
- Errors and delays are common.
- Usually these tasks are made by an UW assistant.

Inefficiency impacts everyone

- Slower claims processing.
- Reduced productivity.
- Lower customer satisfaction

The Problem – Solution

Ask in natural language, get instant answers

- Clear, accurate, and fast answers.
- No more manual browsing.
- Integrated directly into the platform.
- Works like chatting with a colleague.

The screenshot displays the 'inari' Policy list interface. The main table lists 13 items with columns: Reference, Insured name, Country, Orig. CY, Broker, LoB, Incep. date, Exp. date, Premium share, Bus. type, Limit, and Status. The table is filtered by 'All' and shows 13 items. A chat overlay is visible on the right side of the table, showing a conversation with a bot. The chat messages are:

- Bot: Hello! How can I help you today?
- User: What is the average premium per policy in the portfolio?
- Bot: The average premium per policy on your portfolio is 4,000,000 EUR.

The chat input field at the bottom says 'Type your message'.

Future

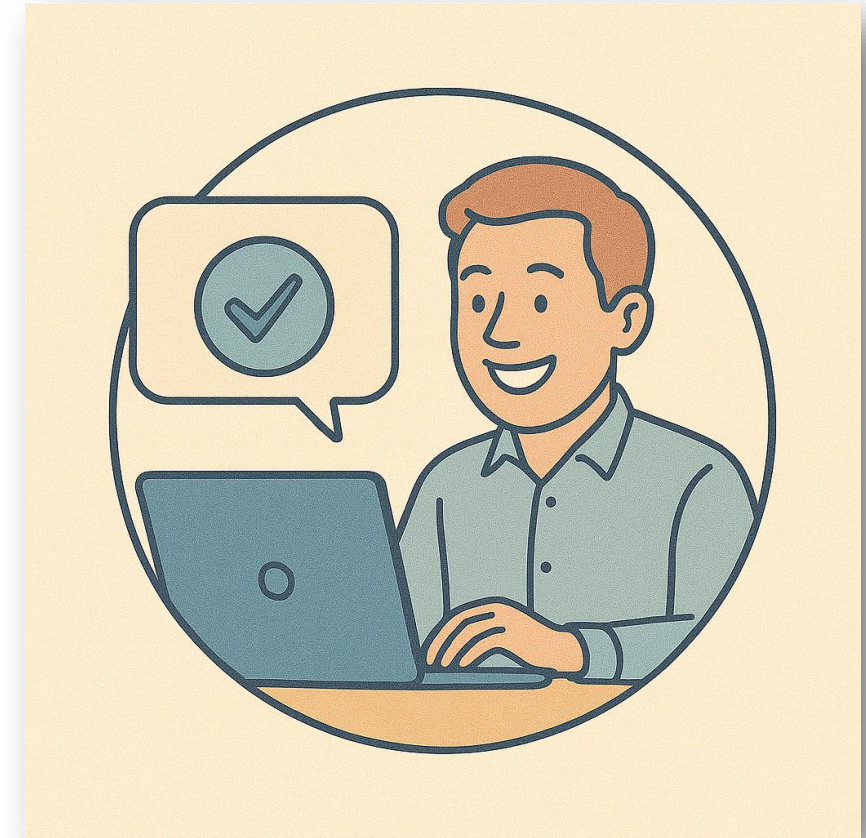

Upcoming features
Graph comparison

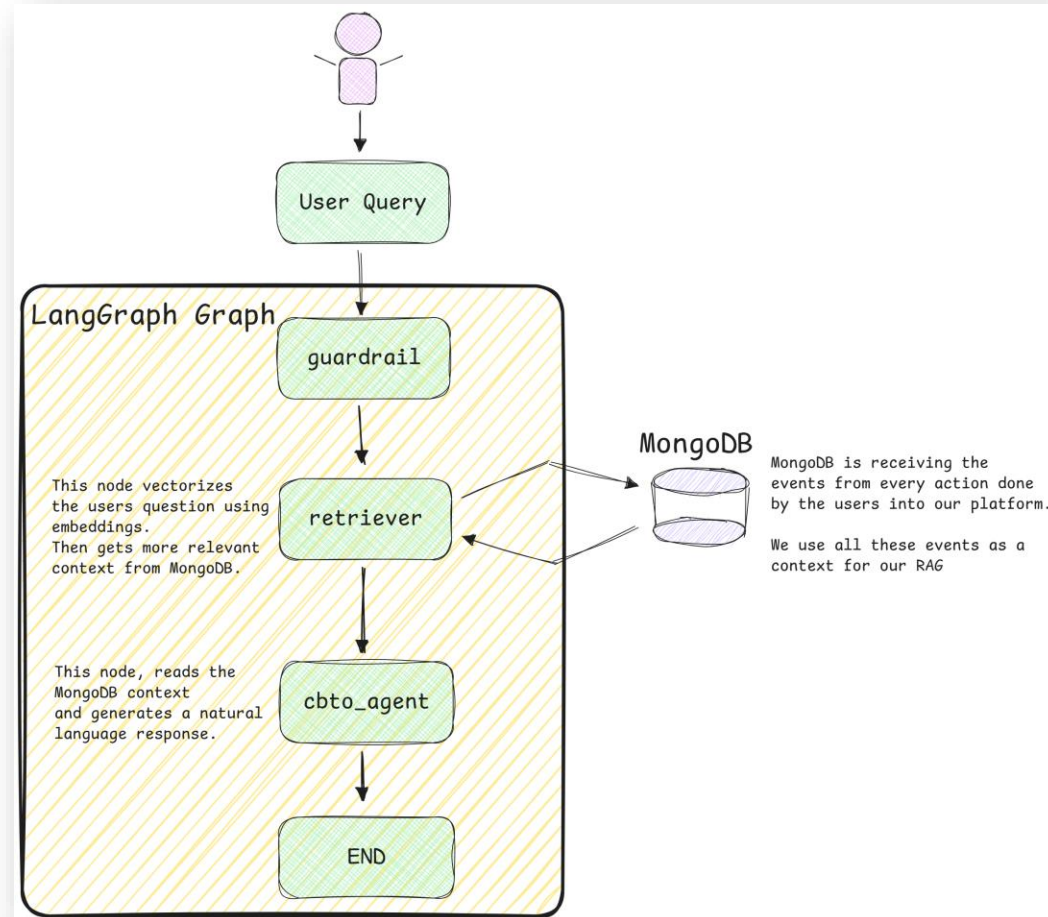

Future – Upcoming features

Smarter and More Capable Assistant

- **MongoDB Integration** – use vector database as context
- **File Upload & Analysis** – query directly from documents
- **Answer Rating System** – improve accuracy through feedback

Future – Graph comparison
